VENTURES VOYAGE

BUDDING ENTREPRENEURS FORUM

COMPANIES THAT BUILT INDIA

ACROSS 7 SECTORS

INTRODUCTION

With GDP expected to grow by 6.4% for the financial year 2025-26, the Indian economy is booming. Seven major industries have most of this development. The financial and IT industry is acting as a catalyst for economic change by means of efficient resource allocation; also, it helps to create enormous money for highly qualified professionals and drives the digital transformation underway across all other domestic sectors. Banks and NBFCs help to direct home savings into investments and supply the loans needed for companies, infrastructure projects, and consumer loans, therefore guaranteeing that the economy runs smoothly.

The automobile industry is also accounting for around 7% of GDP in India. It requires materials such as steel and electronics, which boosts employment creation throughout the whole supply chain. Despite strong import dependency, crude oil is still sustaining India's energy and transportation demands. Because of its enormous refining capability, the country also continues to be a major world center for exports of sophisticated petroleum products.

Supporting trade and connectivity throughout the fast-growing domestic market, the strategic aerospace sector is vital for national security, defense manufacturing, and the development of required civilian aviation infrastructure. The Emulsion Paints segment is a major barometer of consumer confidence and the construction boom, reflecting fast urbanization and increasing disposable incomes of people in India driving home refurbishment.

The agricultural industry is India's fundamental sector. For many people, it offers sustainability and food security. Ranked as the second-largest producer of rice and wheat, India has become significantly global when it comes to agricultural force, contributing roughly 20% to India's GVA.

ASIAN PAINTS: THE VIBRANT HERITAGE THAT CONSTRUCTED BHARAT

Asian Paints helped to build a contemporary India by introducing innovative ideas, growing confidence, and developing great knowledge of Indian home building. In 1942, four buddies in Mumbai began it at a time of severe financial unrest.

In a previously unexplored industry, the company started creating paint on a big, methodical basis. Imports drove the businesses that made up the painting sector at the moment.

Asian Paints is unique in that it made paint, which was formerly only available to the wealthy, accessible to everyone for usage in their homes. New innovations were introduced by the firm, better product distribution was done, and purposeful marketing was used to deliver high-quality paint across Indian towns and villages. Most homes were acquainted with Asian Paints; the slogan "Har Ghar Kuch Kehta Hai" emphasized for Indians the value of the house.

Among the first businesses to employ computers for color matching and consumer demand prediction to guarantee correct delivery of items to consumers was Asian Paints. The company developed into home design, waterproofing, and providing design suggestions over many years, positioning itself as a trusted source of help in improving dwellings. In addition to painting Indian houses, Asian Paints helped to grow the Indian economy and industry by professionalizing the painting industry, supporting merchants, and setting creative standards. It is, in a way, one of the pillars of current residential culture in this country

ISRO - PROPELLING NATION'S DREAMS INTO SPACE

In the early 1950s, an Indian astronomer while working abroad realized the need for aerospace development and advancement in India. This need prompted Dr. Vikram Sarabhai to return back home and cultivate the space programs from the grassroots level. This laid the foundation of the Indian Space Research Organization (ISRO)-the crown jewel of India's space sector.

ISRO faced inevitable challenges and obstacles during its initial phases. But the resilience of the scientists and employees and the unwavering support bestowed by the government of India bore fruit when ISRO launched its first satellite, Aryabhatta, into space in 1975.
It was the time when the country was bracing for problems like economic instability, poverty, and illiteracy. Despite all these, ISRO never looked back and transformed into a global aerospace giant.

Chandrayaan Satellite and Mangalyaan officially paved the way for India to discover and research about the moon and Mars.
Today, ISRO not only harnesses the aerospace market for India but has also signed multiple contracts with countries like Brazil, South Africa, Vietnam, Indonesia, and many others to launch their satellites into space. Between January 2015 and December 2024, ISRO (through its launch vehicles PSLV, LVM3, and SSLV) launched 393 foreign satellites, earning around US$ 439 million (23,327 crore) over that 10-year period.

Thus, it not only acts as the technological beacon of the country but also plays a vital role in contributing to the nation's revenue.

BUSINESSES THAT BUILT BHARAT: THE ROLE OF ONGC IN SHAPING INDIA'S ENERGY FUTURE

Visionary companies shape a country's economy and propel its advancement. India's crude oil sector is one of these pillars, with Oil and Natural Gas Corporation (ONGC) at the center of change. ONGC, the foundation of the nation's energy system, has been instrumental in the literal and economic development of Bharat.

ONGC is the biggest oil and gas exploration and production company in India, having been founded in 1956. The company, which operates in land, offshore, and deep-water basins, is in charge of finding, drilling, refining, and supplying natural gas and crude oil—resources that are essential to homes, businesses, transportation, and power. About 70% of India's crude oil and 80% of its natural gas are produced by ONGC, making it indispensable to the nation's energy independence.

Beyond its operations, ONGC represents India's spirit of entrepreneurship. From Gujarat's Ankleshwar oil fields to the vast Bombay High offshore basin, ONGC boldly ventured into uncharted territory during a time of limited technological capability, capital, and expertise. These tactical innovations not only increased India's energy security but also decreased its dependency on imports and boosted industrial development. Beyond energy, ONGC's success has far-reaching effects. It has boosted ancillary industries, created jobs, sped up regional development, and greatly increased India's GDP. Its current global expansion and investments in renewable energy demonstrate a forward-thinking strategy.

In every way, ONGC is more than just an oil company; it is a trailblazer that fueled India's economic development. It serves as a genuine illustration of the companies that shaped Bharat by fostering development, aspiration, and independence.

SBI: THE BANK THAT GREW WITH INDIA

Where Trust Isn't Just Given — It's Earned.

The State Bank of India holds a unique place in India's story. For generations, it has been the first step in the financial journey of millions—whether it's a student opening their very first account, a farmer searching for support, a family applying for a home loan, or a small business looking for the confidence to expand.

SBI has quietly stood beside people at every stage of life, helping the country grow one decision at a time. What truly sets SBI apart is the trust it has built over decades. Walk into any branch—be it a small village outpost or a busy metro hub—and you'll find people from every background. Their dreams may be different, but their belief in SBI is the same. This trust didn't come overnight; it was earned through consistent service, reliability, and a genuine commitment to the people it serves.

As India stepped into a new digital era, SBI moved forward with it. Platforms like YONO, simpler online services, and accessible credit options helped millions transition into digital banking with confidence. For many Indians, SBI became their first introduction to modern, technology-driven financial services.

Today, SBI continues to represent stability, inclusion, and progress. It proves that banking isn't just about handling money—it's about empowering individuals, families, and communities to move ahead.
"SBI doesn't just serve customers — it supports India's journey."

INFOSYS: THE INDIAN TECH DREAM THAT TOOK OVER THE WORLD

Seven Engineers. One Vision. A Nation Transformed

If there's one corporate story that feels almost cinematic, it's the rise of Infosys. In 1981, seven engineers with almost nothing — except a bold idea and stubborn self-belief — decided to start a company of their own.

They weren't trying to build a giant. But slowly, almost quietly, they helped rewrite India's place in the global tech world.

Most of us don't see Infosys directly, yet its work follows us everywhere. The smooth banking apps we trust, the airport systems that keep things moving, even the cybersecurity layers working silently in the background — Infosys is woven into everyday life without drawing attention to itself.

What truly changed the game was how the company proved the world wrong about Indian talent. At a time when expectations were low, Infosys delivered work that made people look twice. Its Bengaluru campus soon became a starting line for thousands of young engineers finding their way into tech.

Today, the company keeps pace with a fast-changing world — from AI and cloud platforms to sustainability and digital transformation. Programs like Infosys Springboard carry that spirit forward by helping young learners build real, relevant skills.

"Great companies build India. Visionary ones help India dream bigger."

TATA GROUP: BUILDING INDIA ACROSS MULTIPLE SECTORS.

Tata Group: A company that helped shape modern India:-
The Tata Group is more than just a business—it is a name that generations of Indians have grown up trusting. Founded in 1868 by Jamshedji Tata, the company has spent over 150 years contributing to India's growth. Whether it is steel, cars, hotels, IT services, or even airlines, Tata has played a major role in building the India we know today.

Changing the way India travels :
When Tata Motors entered the automobile sector, transportation in India changed forever. Affordable trucks and buses made it easier for goods to reach every corner of the country. Later, Tata introduced cars like the Indica and even the Nano, which aimed to make car ownership possible for ordinary families. Their global step—acquiring Jaguar Land Rover—also showed the world the power of Indian companies.

Taking India into the IT world :
When Tata Motors entered the automobile sector, transportation in India changed forever. Affordable trucks and buses made it easier for goods to reach every corner of the country. Later, Tata introduced cars like the Indica and even the Nano, which aimed to make car ownership possible for ordinary families.
Their global step—acquiring Jaguar Land Rover—also showed the world the power of Indian companies.

Powering home and the future :
With Tata Power, the group helped supply electricity across India. What makes it even more important today is Tata's focus on renewable energy like solar and wind power. This supports a clear, greener future and helps reduce pollution and dependence on fossil fuels.

Aviation and Hospitality with Heart :
Tata's role in aviation began early, when Air India was founded by J.R.D. Tata in 1932. Recently, the group brought Air India back, hoping to rebuild it into a world-class airline. In hospitality, Taj Hotels became a symbol of Indian luxury and service.
They helped bring global attention to Indian tourism and
created thousands.

HINDUSTAN MOTORS
SINCE 1942

India has given the world many big companies in every sector that have contributed to shaping India and the world. One of the biggest companies is in the automotive sector, known worldwide and founded in 1942: Hindustan Motors.

Hindustan Motors Limited [HML] was India's pioneering automobile manufacturing company, founded 83 years ago, before India's independence in 1942, by Brij Mohan Birla. It was India's first major automobile producer that laid the foundation for automobile manufacturing in the country.

The first vehicle produced by Hindustan Motors was the Hindustan Ten, introduced in 1946, which was a version of the Morris Series M model. The Ambassador, launched in 1957, was based on the Morris Oxford Series III and is one of the most recognizable Indian cars produced by Hindustan Motors. It was the first Indian company to manufacture automobiles on a large scale and sell them across India.

Hindustan Motors has shaped the Indian automobile sector and has given a pathway to the upcoming companies by giving India its first successful and well-known car, the Ambassador. Setting Indian standards and becoming an international company. Their legacy lives forever and is an inspiration for the upcoming companies.

BLAZE'25 (IGNITING IDEAS)

FLAME UNIVERSITY , FLAME CENTRE OF ENTREPRENEURSHIP AND INNOVATION

Our team had the opportunity to participate in BLAZE'25, the Blaze Hackathon / Business Hackathon hosted by FLAME University's Centre for Entrepreneurship and Innovation. The event truly lived up to its theme of "Igniting Ideas," bringing together enthusiastic students from various universities under one roof.

Masterclass and Kickoff the day began with an intensive two-hour masterclass designed to equip participants with cutting-edge insights and core concepts connected to the hackathon themes.

This session not only introduced the problem space but also created an environment focused on learning, curiosity, and skill-building. Students from diverse academic backgrounds engaged actively, which enriched the discussions and broadened everyone's perspective.

After the masterclass, participants headed for lunch. This break turned into an informal networking opportunity where teams could interact, share early thoughts, and build rapport before the competition officially began. The relaxed setting helped ease initial nerves and encouraged open conversations among participants.

The Challenge Reveal Once everyone regrouped, the formal commencement of Blaze'25 took place. The organizers introduced updated instructions and revealed the main challenge of the hackathon.

Each team received the prompt on the spot: to conceptualize and design a physical smart device that could recognize and optimize grocery management and cooking decisions. This real-time prompt created a sense of excitement and urgency, testing how quickly teams could understand the problem and start ideating.

The spontaneous nature of the challenge encouraged creativity, adaptability, and practical thinking. Teams had to draw on both technical knowledge and real-world understanding of how people manage groceries and plan meals.

Team Structure and Brainstorming. Initially, each team consisted of six members. To improve collaboration and ensure that everyone's voice was heard, the organizers later split each team into two sub-groups of three. This restructuring allowed for more focused discussions and helped participants explore multiple solution directions in parallel. Each group was also assigned a dedicated volunteer point-of-contact (POC) to streamline communication and logistics, which made the overall experience smoother and more organized.

During the brainstorming phase, team members sat together to discuss, challenge, and refine their ideas. Everyone was encouraged to participate actively, provide constructive feedback, and critically evaluate different approaches. This stage was crucial in narrowing down concepts and moving towards a well-defined solution. Once teams finalized their initial ideas, they submitted their proposals. Participants were then encouraged to mingle and network with other teams while the judges reviewed all submissions individually. This arrangement kept the atmosphere lively and fostered a sense of community despite the competitive setting. A Twist in the Challenge. A unique twist was introduced for selected teams: their proposed devices had to work without cameras.

This constraint forced those teams to think beyond conventional image-based recognition and reconsider their choice of sensors, detection mechanisms, and interaction methods. It became a true test of technical creativity and problem-solving ability.

It became a true test of technical creativity and problem-solving ability.

Working around this limitation required teams to rethink assumptions and innovate within boundaries. It highlighted how real-world product development often involves dealing with constraints such as privacy, cost, or hardware limitations.

Final Pitches and Results:

The hackathon concluded with a series of business pitches, where teams presented their refined concepts and business models to the judging panel. Each group had to clearly explain the problem, their solution, its uniqueness, feasibility, and potential impact. After a careful evaluation of all presentations, the results were announced.

Team SHEFF emerged as the winner, continuing their legacy by securing victory for the second consecutive year. Their success reflected strong innovation, clarity of thought, and effective pitching skills. The entire event showcased how students can collaborate, think on their feet, and deliver tangible ideas under time pressure, mirroring real-world entrepreneurial challenges.

Learnings and Reflections by the end of the competition, our entire team walked away with valuable learnings. We developed sharper leadership skills, learned to communicate quickly and effectively, and strengthened our ability to think, adapt, and evolve within a limited time frame. The hackathon environment pushed us out of our comfort zones and taught us how to make decisions efficiently while working in a team.

Beyond the competition, we also enjoyed exploring the FLAME University campus. The surroundings were modern, beautiful, and thoughtfully designed, which added to the overall experience and made the day even more memorable.

A Note of Gratitude:

We are sincerely grateful to the Budding Entrepreneurs Forum for giving us this golden opportunity to participate in BLAZE'25. The event not only helped us learn and grow but also inspired us to continue pursuing innovation and entrepreneurship in the future.

CONCLUSION

India's future is being carved by leaders who realize that genuine progress stems from interconnected growth rather than separate successes. The companies that are leading the change in sectors such as Energy, Automotive, IT, and Electronics, Finance, Infrastructure, Pharma, and Metals are not just doing the business they are supposed to do. They are going beyond their call of the business to help in creating the country's next chapter. One sector thus feeds and strengthens the other creating a web of innovation that has a significant impact on both India and the world.

These industries which are doing all this wonderful work are the same ones that power, build, and provide the healthcare and data needs of the country. India's development is so interconnected that their advancement is proof of it.

The real question is not whether India can compete globally but rather how fast these seven sectors can transform and dominate. The companies that this newsletter showcases are already out of the box, doing more than just setting new standards, they are attracting entrepreneurs by their example and showing that ambition supported by action is the way to a nation's power.

Their labour mirrors the communal dream which is India being an self-sufficient, competitive, and trend-setting country. As a consequence of the advent of new technologies and better investment decisions, these sectors are setting the stage for a lasting and sustainable prosperity.
So the question remains: will you be part of this change? The chance to influence India's future has never been bigger whether you are an investor, a builder, or just inquisitive.
